

HEADQUARTERS  
COUNTER INTELLIGENCE CORPS CENTER  
HOLABIRD SIGNAL DEPOT  
BALTIMORE 19, MARYLAND

Sept. 15, 1947.

To Whom It May Concern:

This is to certify that Special Agent G. C. Backster, Jr., who at present is retained as an instructor of Interrogation at the C.I.C. Center, Camp Holabird, Baltimore, Maryland, has developed his ability in sub-conscious isolation to a high degree of perfection.

Mr. Backster has and does devote much of his time to research and study in this field.

His approach to the subject is on a highly scientific plane as the physiological and psychological reactions of the subject are of primary importance to him in his work.

I have personally witnessed various research problems conducted by Mr. Backster in sub-conscious isolation and I am firmly convinced that this work has a definite place in intelligence activities. The implanting or erasure of information from the mind; the recall, through the sub-conscious, of forgotten facts or information; and the ability of causing wanted information to be divulged are of inestimable value in espionage penetration or intelligence work.

I do not hesitate in recommending Mr. Backster in such fields of endeavor where his ability can be put to its fullest use in the service of his country.
